

FOR IMMEDIATE RELEASE

Delta-midi (stylised as "ΔMIDI") is happy to announce its first public project.

ΔMIDI 001:model D – hardware, dedicated MIDI controller to work with Minimoog® Model D virtual instruments - VSTs.

It offers full control of Minimoog-based virtual instruments (VST) such as: **Arturia Mini V**, **Native Instruments Monark**, **UAD Minimoog®**, **GForce MINIMONSTA®**, and others. Under **every** DAW.

Thanks to the open nature of this project (we will make this controller open-source hardware after a successful campaign), it is possible to adjust or tweak every aspect of 001:model D, and use it as a universal MIDI beast with a handful of knobs and switches.

What distinguishes the 001:model D and makes it worthy of attention, is the 1:1 layout of what we see in the VST, which allows for much easier control of the virtual synthesizer, and therefore control of the entire instrument.

Currently, we offer a black version, with gold lettering; but the 'stretch goals' on the Kickstarter campaign may bring a white variant and a Eurorack-mountable 001:model D.

Technical details:

- 21 analogue potentiometers
- 6 6-stage knobs
- 15 toggle switches
- 2 lever switches
- 3 LED indicators

44 controls in total.

In addition, the controller has a *sync* button for instant settings transfer, and a *map* button for changing MIDI mapping, such as MIDI Channel and MIDI CC for maximum compatibility and flexibility.

- Self-powered from the USB bus, with a class-compliant MIDI-USB interface.
- Open-source hardware; hackable, based on Arduino® platform.

Mechanical:

- Three layers of fibreglass reinforced laminate with an additional layer of sheet aluminium. All CNC-machined.
- Gold plated lettering.
- Eurorack-compatible design.
- Dimensions: 425 mm x 110 mm x 48 mm (16.75" x 4.3" x 1.9")
- Weight: 1100 g (2.4 lbs)

Designed and hand-assembled in Gdynia, Poland 

The design is complete and the controller works flawlessly. We will produce one pre-production prototype, with cosmetic changes, but what you can see in the campaign is the closest to what the final version will look like.

001: model D is launched exclusively via Kickstarter.

Starting at €155 (€188 with 20% tax), as a limited, 'early bird' offer, to the regular Kickstarter price of €210 (€252 with 20% tax). Worldwide shipping is available.

Kickstarter campaign is live now (2022/07/12), and ends on 2022/08/11, 7:35 PM CEST.
